Detailed Action

Response to Argument

1. Applicant's arguments, see amendment, filed 10/13/2008, with respect to claims 15, 22 and 30 have been fully considered and are persuasive. The rejection of claims 15-34 has been withdrawn. Further, Examiner acknowledges the cancellation of claims 25, 26 and 34. However claims 27-29 depend on cancelled claims 25 and 26.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Amendment

27-29 (Cancelled).

3. Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael Prewitt on December 22, 2008.

Allowance

4. Claims 15-24, 30-33 and 35-37 are allowed. The following is an examiner's statement of reasons for allowance:

In reference to claims 15, 22 and 30: Bornemann et al. (U.S. Patent 6,539,313, hereon Bornemann) teaches a method for monitoring the installation of a working tool

(see Bornemann, Abstract and column 1, lines 9-12). The method comprising: calculating from a time dependent the measurement signal a characteristic variable for the working tool (see Bornemann, column 3, lines 39-49); comparing the characteristic variable with previously recorded reference values for the measurement device (see Bornemann, column 3, line 63 to column 4, line 2); and using the comparison as the basis to automatically generate a message as to whether the working tool has been installed according to the manufacturers instructions or specification so as to eliminate disturbing effects (see Bornemann, column 4, lines 4-11). This is the state of the art.

The primary reason for the allowance of claims 15, 22 and 30 is the inclusion of the limitation: "...the method of monitoring the installation of a measurement device having a measurement signal comprising calculating from time series $s(t)$ of said measurement signal a characteristic variable for said measurement device; comparing said characteristic variable with previously recorded reference values for said measurement device; and using said comparison as the basis to automatically generate a message as to whether said measurement device has been installed according to the manufacturers instructions so as to eliminate disturbing effects."

It is these limitations, as recited in combination with the dependent claims 16-19, 21-24, 31-33 and 35-37 which are found in each of the claims but are not found, taught or suggested in the prior art of record, that makes the claims allowable over the prior art.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a. Rodilla (U.S. Patent 6,429,642) teaches programmable monitoring device for electric consumption.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ELIAS DESTA whose telephone number is (571)272-2214. The examiner can normally be reached on M-Fri (10:30-7:00).
